***Response to Amendment***

1. This is a new action in response to the amendment of June 28, 2006.

***Claim Rejections - 35 USC § 102***

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 18-25 are rejected under 35 U.S.C. 102(e) as being anticipated by Osborne et al.

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Osborne et al. shows a computer readable medium having a computer program stored thereon to perform a method comprising determining a voltage of a fluid-ejection nozzle over time as the fluid ejection nozzle attempts to eject fluid, determining whether the voltage of the nozzle at a predetermined time after the nozzle began to attempt to eject the fluid exceeds a threshold, where the voltage at the predetermined time exceeds the threshold, concluding that the nozzle failed to eject the fluid, and otherwise concluding that the fluid ejection nozzle ejected the fluid (column 9). Regarding claim 20, Osborne et al. shows a thermal fluid ejection device comprising at least one thermal fluid mechanism, each mechanism having a plurality of thermal fluid ejection nozzles, and a

Art Unit: 3752

mechanism to determine whether any of the nozzles of any of the at least one mechanism has clogged without having to interrupt intended fluid ejection by the at least one fluid ejection mechanism (column 7, lines 21-66).

***Allowable Subject Matter***
